PLM and Collaboration
Intergration with CAD Tools
Automated Export and Import

Introducing System CAD:
new generation of EDA automation tools
bridging the gap between MCAD and ECAD
applications.

TurboTools

TurboTools Corporation is a leading innovator of Electronic Design Automation (EDA) enterprise software applications offering the next generation engineering automation solutions.

Unique Solution

TurboTools' unique solution provides the next generation of EDA/CAD/PLM enterprise software applications for the next generation speed in designing, developing, testing and bringing products to market, at substantial cost savings.

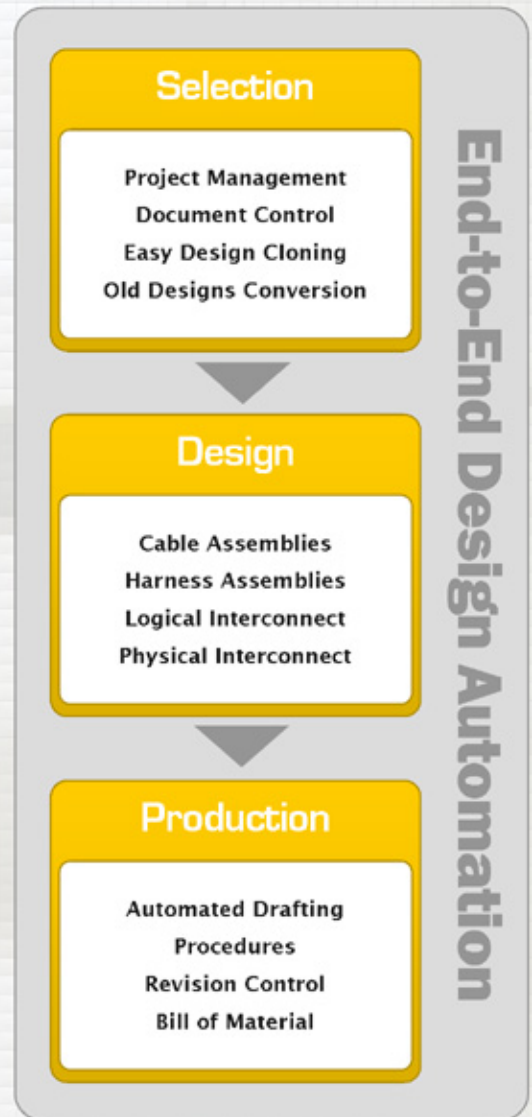

TurboTools introduces the first application from the System CAD (SCAD) family of products —CablEquity™— an innovative EDA software solution for companies involved in mechatronics design and manufacturing.

CablEquity has the most compelling solution to come along in years on the market. It is entirely new EDA/PLM approach because of its unique design architecture.

- ▶ Bridges two major engineering disciplines – Mechanics and Electronics
- ▶ Introduces software innovation into traditional Hardware Electrical Systems design process
- ▶ Tracks all management and design activities

Key Benefits

- ▶ Eliminates design errors by automating data acquisition, enforcing design rules, and guiding
- ▶ Eliminates routine tasks — automatically generates all drawing, schematics, and bills of materials.
- ▶ Provides Document Control and facilitates collaboration
- ▶ Offers CAD/EDA functionalities with PLM capabilities
- ▶ Enables complete analysis of electrical systems before manufacturing, avoiding potential system failures later in production
- ▶ Improves Productivity by eliminating manual design processes
- ▶ Integrates seamlessly with company-wide engineering, manufacturing, purchasing processes
- ▶ Reduces Time-to-Market and Time-to-Revenue
